

ABSTRACT**ASSEMBLY FOR PACKAGING AND DISTRIBUTION OF A PRODUCT**

- 5 The present invention relates to an assembly for packaging and distribution of a liquid product comprising:
- a receptacle (20; ...; 620), intended to contain the product;
 - a distribution head (10; ...; 610), fitted to the receptacle, comprising at least one nipple (40; ...; 440) with a distribution orifice (42; ...; 642) able to
- 10 communicate with the interior of the receptacle;
- a capsule (30; ...; 630) comprising at least one window (39; ...; 639) delimited by an edge extending at least in part in a plane (P);
- the capsule being movable in relation to the nipple between a closed position in which the distribution orifice is at least partly opposite a portion of the
- 15 capsule extending away from the window and an open position in which the distribution orifice :
- i) is located externally to the capsule, at a distance not equal to zero from said plane (P), and/or
 - ii) emerges via a flexible membrane (50; ...; 550) fitted to said window,
- 20 via at least one slit (52; ...; 552).
